

Troubleshooting

How to turn on Windows hardware acceleration?

Turning on Windows hardware acceleration

Here's how to turn on hardware acceleration globally for all programs.

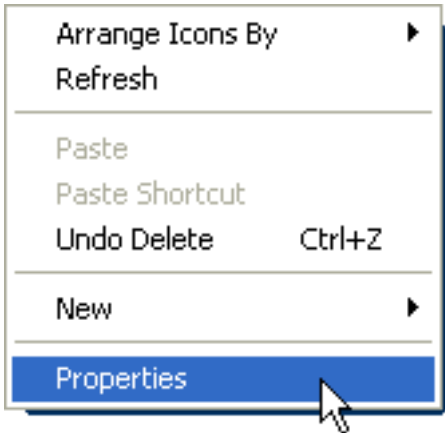

Windows Vista / Windows 7	
<p>1 Click Start / Control Panel / Appearance and Personalization.</p> <p>2 Under Personalization, click Adjust screen resolution.</p> <p>3 On the Display Settings dialog, click the Advanced Settings... button.</p>	
<p>4 On the monitor properties dialog, click the Troubleshoot tab.</p> <p>5 Click the Change settings button.</p> <p>6 On the security dialog, click Continue.</p>	
<p>7 Move the Hardware Acceleration slider to the Full notch.</p> <p>5 Click OK.</p> <p>6 Restart Windows to record Skype video calls.</p>	

Troubleshooting

Windows XP

1 Right-click the desktop, then on the context menu, click **Properties**.

2 Click the **Settings** tab, then click **Advanced**.

Troubleshooting

- 3 Click the **Troubleshoot** tab.
- 4 Move the **Hardware Acceleration** slider to the **Full** notch.
- 5 Click **OK**, then **Close**.
- 6 Please restart Evaer and Skype to record Skype video calls .
